SUMMARY

Artificial Intelligence professional pursuing a Master's degree with a specialization in Large Language Models (LLMs). Experienced in building LLM- and RAG-based applications, data extraction systems, and AI-driven automation solutions. Strong background in Python, NLP, and scalable AI development. Passionate about delivering intelligent systems that create measurable business impact.

EXPERIENCE

Artificial Intelligent Software developer

Timeless Soft GmbH **January 2025 - March 2026, Vienna, Austria**

- Developed the "e-novations" platform, designing backend optimization algorithms to identify the most cost-efficient EV charging tariffs across Austria based on user location.
- Built and deployed LLM-powered solutions for customer identification and data automation.
- Developed ML models for category-level product price prediction (Minimist).
- Built additional ML models using Random Forest and XGBoost for other predictive tasks.
- Worked with PostgreSQL, MySQL, and MongoDB; built Python backend services and tested APIs using Postman.

Artificial Intelligent Software developer (Internship)

Treetop Medical GmbH **July 2024 - September 2024, Vienna, Austria**

- Developed and integrated a Streamlit application for project visualization and reporting.
- Researched, implemented, and fine-tuned LLM-based solutions for data extraction and multi-class classification using Hugging Face and Transformers.
- Enhanced project infrastructure with DevContainer support and advanced workflows for scalable AI development.

Technical support

Manaseer Group **August 2022 - September 2023, Amman, Jordan**

- Specialized in software support, including Microsoft Office Suite installation, troubleshooting, and collaborative problem-solving.
- Experienced in hardware maintenance, including diagnosing and replacing faulty components, printer upkeep, and camera installations.

PROJECT

ESG Intelligence Platform (AIKA Startup)

pp.partner • www.aika.at • January 2025 - Present

- As CTO and key partner, led the development of an ESG intelligence platform for sustainability analysis and reporting.
- Developed an LLM-powered application using RAG for semantic search and knowledge accessibility across ESG documents.
- Built frontend using TypeScript and backend services using Python.
- Integrated vector database search for ESG reporting and knowledge management.

AI-Powered Study Assistant Platform

Personal Project • www.progrezz.at • August 2025 - December 2025

- Developed an AI-powered study assistant for automated quiz, flashcard, and content generation.
- Implemented LLM-based feedback to personalize learning and identify weak study areas.
- Improved learning efficiency through intelligent content generation and structured study workflows.

EDUCATION

MasterDegreein Artificial intelligence

Minor in Natural Language Processing • Johannes Kepler University Linz • Linz, Austria • 2026

Bachelor in Computer Science

AlBalqa Applied University • Amman, Jordan • 2022

INVOLVEMENT

Participant (Team: Bedouins)

Linz, Austria • JKU • November 2025 - November 2025

- Participated in Data/AI category solving real-world challenges.
- Completed 5 levels in competitive environment.
- Ranked 5th at JKU Linz, 27th globally.

SKILLS

AI/ML, LLMs (Open & Closed Source), NLP, Computer Vision, RAG, AI Agents, Prompt Engineering, MCP, Python, NumPy, Pandas, spaCy, Hugging Face, LangChain, Data Processing, KPI Analysis, Web Scraping, Data Visualization, PostgreSQL, MongoDB, APIs, Postman, Git, Docker, DevOps, Cloud Applications, Chatbots, Automation, Web Development

Languages: Arabic (C2), English (C1), German (A2)
